	Page 28
	BY MR. BROWN:
\square	Q. Dr. Eisch, let's talk for awhile about
3	polyhydroxies.
4	You relied on the the dictionary and your own
5	experience to arrive at a definition for polyhydroxy, is
6	that correct?
7	A. Those would be the dictionary was exemplary. I
8	looked at many other documents, textbooks and so on, yes.
9	But, yes, that would be exemplary and my
10	experience too, yes.
11	Q. But In terms of your actual testimony, the only
12	exhibit that you specifically referred to with respect to
13	polyhydroxies to support your position was a dictionary
14	reference, I believe, from Hawley's; was it?
15	A. That's correct.
16	Q. Did you survey the other technical dictionaries or
17	references to determine whether they all say that a
18	polyhydroxy has three or more hydroxyl units?
19	A. I looked at a number of dictionaries, but I tended
20	to concentrate not on what you what call chemical
21	technological dictionaries, but on chemical dictionaries.
22	Q. And in your review of those chemical dictionaries,
23	isn't it true that in substantial number of them define
24	polyhydroxy as containing two or more hydroxyl units?
25	A. No, it's not true, in my impression, of what I
	Page 29
1	surveyed.
2	Q. Let's turn to Exhibit 319.
3	A. (The witness complied.)
4	Q. Are you familiar with the dictionary of
5	biochemistry and molecular biology?
6	A. Yes, I think I've seen the title.
7	Q. Okay. Focus in on polyhydroxy, would you agree
8	with me Dr. Eisch, that this reference defines
9	polyhydroxy as containing two or more hydroxyl units?
10	A. Yes, but I would add to the fact that this is not a
11	chemistry dictionary. It's a biochemistry and biology

- 12 dictionary, which I would not take as authoritative.
- 13 Q. But for people who are working with bones, would
- 14 you agree that bone biology is in the area covered by
- 15 this textbook, this reference book?
- 16 A. I would say to that that people in whatever field,
- 17 they're dealing with chemical terms ought to seek18 chemical definitions.

19 Q. So I don't think it would be appropriate for a
20 person working in the field of bone biology to rely on

- 21 this reference?
- 22 A. I don't think so, for chemical answers.
- 23 Q. Let's look at the exhibits 321.
- 24 A. (The witness complied.)
- 25 Q. Are you familiar with Webster's dictionary?

		1	
	Page 30		Page 32
	A. Yes, in its many manifestations.	1	What testimony are you talking about?
_ (Q. Let's see what Webster's dictionary has to say	2	Q. On polyhydroxy, the term polyhydroxy.
	about polyhydroxyee.	3	A. Well, as I see, in the use in the patent, I was not
4	And am I correct that it refers to polyhydroxy	4	clear from the intrinsic evidence on what it ought to
-	that is containing more than one hydroxyl group in the	5	-
	molecule?		mean.
•		6	Q. All right. Well, let's turn to the '558 patent,
	A. Yes, but I would add that if you look at the word	7	Trial Exhibit 175 at column 6, lines 53 to 68.
	poly, which means many, I don't think two in any language	8	Do you have that in front of you, doctor?
9 :	is considered many.	9	A. (The witness complied.)
10	And so I would not and I certainly wouldn't	10	Yes, I can see it here.
11	go into a collegiate dictionary to get a definitive	11	Q. Now, am I correct that it contains the language
	active answer on chemical nomenclature.	12	polyhydroxy compound is selected from the group
	Q. Now, when you testified about the meaning of	13	consisting of acyclic polyhydric alcohols, non reducing
	polyhydroxy, you didn't allude to the patent as a basis	14	sugars, sugar alcohols, sugar acids, monosaccharides
	for your definition of polyhydroxy; did you?	15	disaccharides, water soluble or water dispersible,
	A. No. I did not.	16	oligosaccharide, polysacharides, polyalkylene glycols,
	Q. Is that because you didn't rely on the language in	17	and mixture thereof, correct?
	the patent in formulating your opinion as to what the	18	Q. Now, you testified that we can all agree that a
	term polyhydroxy means?	10	glycol means two hydroxyl groups; is that correct?
		1	
	A. Well, I think if you're looking for the meaning of	20	A. A glycol, with the proviso that in calling
	a word in chemistry, it should be in an authoritative	21	something a glycol, you are naming the two hydroxyl group
(context.	22	as being the most prominent functinal group in the
23	And naturally a patent is the product of some	23	molecule.
	people writing it and whether they have based themselves	24	Q. And would you agree that the term polyalkylene
25	on authoritative sources in using their language, I	25	glycol refers to compounds that may contain two hydroxyl
		ł	
		ļ	
			Pore 33
	Page 31		Page 33
	wouldn't know a priori, and so therefore I would always	1	groups and only two hydroxyl groups?
2	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the	1 2 2	groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is
2 3	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word.	1 2 3	groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage.
2 3 4	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative	-	groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question.
2 3 4 5	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to	-	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that
2 3 4 5 6	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right?	3 4 5 6	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it?
2 3 4 5 6 7	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to	-	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was`
2 3 4 5 6 7 8	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about	3 4 5 6	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again.
2 3 4 5 6 7 8 9	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning	3 4 5 6 7	groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right.
2 3 4 5 6 7 8 9	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. 	3 4 5 6 7 8	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN:
2 3 4 5 6 7 8 9	wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning	3 4 5 6 7 8 9	groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right.
2 3 4 5 6 7 8 9 10 11	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. 	3 4 5 6 7 8 9 10	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN:
2 3 4 5 6 7 8 9 10 11	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at 	3 4 5 6 7 8 9 10 11	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may
2 3 4 5 6 7 8 9 10 11 12 13	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. 	3 4 5 6 7 8 9 10 11 12	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct?
2 3 4 5 6 7 8 9 10 11 12 13 14	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, 	3 4 5 6 7 8 9 10 11 12 13	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes.
2 3 4 5 6 7 8 9 10 11 12 13 14 15	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. 	3 4 5 6 7 8 9 10 11 12 13 14	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes. Q. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on 	3 4 5 6 7 8 9 10 11 12 13 14 15 16	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on your review of the patent? 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my satisfaction yesterday, it is a vague term and when it
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on your review of the patent? A. Well, after looking at the intrinsic evidence in 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes. Q. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my satisfaction yesterday, it is a vague term and when it comes right down to it, it is an incorrect term for the
2 3 4 5 6 7 8 9 -10 11 12 13 14 15 16 17 18 19	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on your review of the patent? A. Well, after looking at the intrinsic evidence in the claims and the patent and even the trial history of 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes. Q. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my satisfaction yesterday, it is a vague term and when it comes right down to it, it is an incorrect term for the class of compounds which people who use it seem to be
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on your review of the patent? A. Well, after looking at the intrinsic evidence in the claims and the patent and even the trial history of the patent, which would be the intrinsic evidence, one 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes. Q. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my satisfaction yesterday, it is a vague term and when it comes right down to it, it is an incorrect term for the class of compounds which people who use it seem to be referring to.
2 3 4 5 6 7 8 9 -10 11 12 13 14 15 16 17 18 19 20 21	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on your review of the patent? A. Well, after looking at the intrinsic evidence in the claims and the patent and even the trial history of the patent, which would be the intrinsic evidence, one can in doubt turn to extrinsic evidence, I understand, 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes. Q. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my satisfaction yesterday, it is a vague term and when it comes right down to it, it is an incorrect term for the class of compounds which people who use it seem to be referring to. Q. All right. But there are people in this field who
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. And did you construe the term polyhydroxy based on your review of the patent? A. Well, after looking at the intrinsic evidence in the claims and the patent and even the trial history of the patent, which would be the intrinsic evidence, one can in doubt turn to extrinsic evidence, I understand, and that is where one would resort to chemical 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 groups and only two hydroxyl groups? A. It may refer to that. That is in the usage that is fostered by Osteotech. Yes, that is the usage. Q. Now, you gave let me rephrase the question. THE COURT: Well, that isn't the question that was asked; is it? That isn't the answer to the question that was asked. So ask it again. MR. BROWN: All right. BY MR. BROWN: Q. You would agree that polyalkylene glycols may include two and only two hydroxyl units; correct? A. As that term is used, yes. Q. As that term is used by you and by others; correct? A. As I say, I have trouble with the terminology polyalkylene glycols. As I think I showed to at least my satisfaction yesterday, it is a vague term and when it comes right down to it, it is an incorrect term for the class of compounds which people who use it seem to be referring to. Q. All right. But there are people in this field who use the term polyethylene glycol; correct?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 3	 wouldn't know a priori, and so therefore I would always refer to some authoritative outside source in getting the meaning of that word. Q. So you would look first to an outside authoritative source to interpret a term in the patent rather than to the patent itself; right? A. No, I didn't say that. I said if you wanted to find out the meaning of the word I'm not talking about construing a patent now. I'm talking about the meaning of the word. And that is different than construing. I certainly am construing a patent, look at the patent first, yes, sir. Q. In connection with your definition of polyhydroxy, did you look at the patent? A. Yes, I did. Q. Q. All right. But there are people in this field who use the term polyethylene glycol; correct?

	······································	
	Page 34	Page 36
1	A. Yes.	I than two.
2	Q. Then it follows that the group of polyhydroxy	2 And then a certain subclass of polyalkylene
3	compounds identified in Claim 4 would include at least	3 glycols would have two. And the rest, I think, are
4	some compounds that contain two and only two hydroxyl	4 multiple.
5	groups; correct?	5 Q. So would you agree with me that the patent itself
6	A. Well, sir, I think	refers to those compounds, that is compounds containing
7	Q. Can you answer that simply yes or no?	two and only two hydroxy groups, is as polyhydroxy
8	A. I want to explain my answer. I don't agree with	8 compounds?
9	it, and I would like to explain it.	9 A. Well, I would – no, I would not agree with you.
10	Q. May I have a yes or no first?	10 sir.
11	A. No, I don't agree with it. I gave it your no	
12	THE COURT: But that isn't what he asked you.	
13	Ask the question again.	
14	MR. BROWN: Yes, your Honor.	
14	BY MR. BROWN:	
\mathcal{O}_{i}	Q. Am I correct that the group of polyhydroxy	15 A. May I explain it? 16 Q. Yes or no, doctor.
17	compounds identified in Claim 4 includes at least some	
17	compounds that contain two and only two hydroxyl groups?	17 A. It does contain two hydroxyls.
10		18 Q. And isn't it clear from the specification, the
		19 passage that we've read, that the author is referring to
20	Q. The polyalkyiene glycol term?	20 ethylene giycol as a polyhydroxy compound?
21	A. As it stands there, yes.	21 A. Yes, it is true, but I
22	Q. So it is your construction of the patent claim that	22 Q. Dr., thank you.
23	the term polyhydroxy compound includes polyalkylene	23 A. I would like to explain that.
24	glycols, some of which contain two and only two hydroxyl	24 Q. If you think that followup is necessary, I'm sure
25.	units; correct?	25 counsel for Gensci will do so.

	A. No, sir, that is not my construction.	A. Okay.
	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to 	Q. If your definition of polyhydroxy were adopted,
	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. 	A. Okay. Q. If your definition of polyhydroxy were adopted, 3 that is, a compound having three or more hydroxyl groups,
	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 	 A. Okay. Q. If your definition of polyhydroxy were adopted, 3 that is, a compound having three or more hydroxyl groups, 4 can you identify for us, which of the compounds in that
	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. 	 A. Okay. Q. If your definition of polyhydroxy were adopted, 3 that is, a compound having three or more hydroxyl groups, 4 can you identify for us, which of the compounds in that 5 passage would have to be deleted from the patent?
4 5 6	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. 	 A. Okay. Q. If your definition of polyhydroxy were adopted, 3 that is, a compound having three or more hydroxyl groups, 4 can you identify for us, which of the compounds in that 5 passage would have to be deleted from the patent? 6 A. Ethylene glycol, diethylene glycol, triethylene
4 5 6 7	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. 	 A. Okay. Q. If your definition of polyhydroxy were adopted, 3 that is, a compound having three or more hydroxyl groups, 4 can you identify for us, which of the compounds in that 5 passage would have to be deleted from the patent? 6 A. Ethylene glycol, diethylene glycol, triethylene 7 glycol, one, two propanediol and then the polyethylene
4 5 6 7 8	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) 	A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanediol and then the polyethylene glycols.
4 5 6 7 8 9	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to 	 A. Okay. Q. If your definition of polyhydroxy were adopted, 3 that is, a compound having three or more hydroxyl groups, 4 can you identify for us, which of the compounds in that 5 passage would have to be deleted from the patent? 6 A. Ethylene glycol, diethylene glycol, triethylene 7 glycol, one, two propanediol and then the polyethylene 8 glycols. 9 Q. Thank you, Dr. Eisch.
4 5 6 7 8 9 10	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanediol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term
4 5 6 7 8 9 10 11	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanetiol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides?
4 5 6 7 8 9 10 11 12	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanediol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am.
4 5 6 7 8 9 10 11 12 13	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy compounds, beginning at about line 2 and extenting 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanediol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term?
4 5 6 7 8 9 10 11 12 13 14	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy compounds, beginning at about line 2 and extenting through line 14; correct? 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanediol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term? A. Polysaccharide is a union of many monosaccharide
4 5 6 7 8 9 10 11 12 13 14 15	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Now, can you list for me in that passage those compounds that would contain two and only two hydroxyl units? A. Yes, I could. 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycol, one, two propanediol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term? A. Polysaccharide is a union of many monosaccharide units through the loss of water. Q. Can you tell me how many carbon atoms are found in poly saccharides? A. Well, it depends on which units you're talking about.
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy compounds, beginning at about line 2 and extenting through line 14; correct? A. Yes, sir. Q. Now, can you list for me in that passage those compounds that would contain two and only two hydroxyl units? A. Yes, I could. Q. Would you please do so. 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycols, one, two propanediol and then the polyethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term? A. Polysaccharide is a union of many monosaccharide units through the loss of water. Q. Can you tell me how many carbon atoms are found in poly saccharides? A. Well, it depends on which units you're talking about. The most common unit in the monosaccharide is
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy compounds, beginning at about line 2 and extenting through line 14; correct? A. Yes, sir. Q. Now, can you list for me in that passage those compounds that would contain two and only two hydroxyl units? A. Yes, I could. Q. Would you please do so. A. Starting with ethylene glycol, that would have two, 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term? A. Polysaccharide is a union of many monosaccharide units through the loss of water. Q. Can you tell me how many carbon atoms are found in poly saccharides? A. Well, it depends on which units you're talking about. The most common unit in the monosaccharide is based upon glucose, six carbon atoms.
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy compounds, beginning at about line 2 and extenting through line 14; correct? A. Yes, sir. Q. Now, can you list for me in that passage those compounds that would contain two and only two hydroxyl units? A. Yes, I could. Q. Would you please do so. A. Starting with ethylene glycol, that would have two, diethylene glycol would have two, triethylene glycol 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term? A. Polysaccharide is a union of many monosaccharide units through the loss of water. Q. Can you tell me how many carbon atoms are found in poly saccharides? A. Well, it depends on which units you're talking about. The most common unit in the monosaccharide is based upon glucose, six carbon atoms. Q. And how many units are required for it to be a
4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 A. No, sir, that is not my construction. Q. Let's turn to the specification of '558 patent to see how the term is used there. Did you look at the specification of the '558 patent to see how the term is used? A. Yes, sir. Q. Let's look at Exhibit 175, column 4, lines 2 to 14. A. (The witness complies.) Q. Do you see in that passage, Dr. Eisch, reference to specific polyhydroxy compounds? A. Yes, I do. Q. That passage lists as series of polyhydroxy compounds, beginning at about line 2 and extenting through line 14; correct? A. Yes, sir. Q. Now, can you list for me in that passage those compounds that would contain two and only two hydroxyl units? A. Yes, I could. Q. Would you please do so. A. Starting with ethylene glycol, that would have two, 	 A. Okay. Q. If your definition of polyhydroxy were adopted, that is, a compound having three or more hydroxyl groups, can you identify for us, which of the compounds in that passage would have to be deleted from the patent? A. Ethylene glycol, diethylene glycol, triethylene glycols. Q. Thank you, Dr. Eisch. Now, are you familiar with the term polysaccharides? A. Yes, I am. Q. How do you define the term? A. Polysaccharide is a union of many monosaccharide units through the loss of water. Q. Can you tell me how many carbon atoms are found in poly saccharides? A. Well, it depends on which units you're talking about. The most common unit in the monosaccharide is based upon glucose, six carbon atoms.

24 Q. How about eryunnol at all?25 A. No, that has four. And the next one also has more

۰.

10 (Pages 34 to 37)

25 other alcohols, for example, we talk about Mono

		1	
	Page 38		Page 40
L	saccharides, disaccharides, trisaccharides. One even	1	Q. Do you normally think of paste as a liquid?
	hears tetrasaccharides, and somewhere in there one	2	A. No.
3	switches over to the general name oligosaccharide, which	3	Q. More viscous than a hquid?
4	may take you up to ten or twenty units.	4	A. Well, it has a number of things. It's not
5	And then beyond that you are into	5	transparent, it is note easily flowable.
6	polysaccharides.	6	Q. How about - how does it compare in viscosity to a
7	Q. So would you agree with me that polysaccharides	7	gel?
8	have and always have more than 18 carbons?	8	A. Well, depends on how firm the paste is. If it were
9	A. Yes, sir.	9	very firm and could stand on its own with a little
10	Q. Let's turn to Claim 4 of the '558 patent, Exhibit	10	quivering like a gel, I guess it would be then a
11	175.	11	comparison. But you can think of paste that don't
12	A. (The witness complies.)	12	resemble gels closely.
13	Q. Am I correct that Claim 4 on the '588 patent lists	13	Q. And puddy more or less viscus than paste?
14	certain of the polyhydroxy compounds as carriers?	14	A. Is it more viscus?
15	A. Yes, sir.	15	Q. More or less.
16	Q. And among the compounds it lists as carriers are	16	A. What do you mean? Well, depends if you get a very
17	polysaccharides; correct?	17	stiff paste and the puddy, they might be
18	A. Yes, sir.	18	indistinguishable. These are vague terms.
19	Q. You've told us that polysaccharides always contain	19	Q. Gel, puddy, paste?
20	more than eighteen carbon atoms; correct?	20	A. No, gel is not vague term. Puddy and paste that
21	A. Yes, sir.	21	you bring up are.
22	Q. But you testified that in your view the term	22	Q. Well, you do you think of puddy and paste being
23	polyhydroxy is limited to compounds containing two to	23	more or less viscus than gel?
24	eighteen carbon atoms; correct?	24	A. It depends on their consistency.
25	A. Yes, sir.	25	Q. So it could be - they could be more viscous than
	Page 39		Page 41
1	Q. So under your view, the category of polysaccharides	1	gel or they could be less viscous?
2	contained in Claim 4 literally would be stricken from the	2	A. Yes.
3	claim?	3	Q. You've testified that pluronic in water does not
4	A. If it is so construed, that's right.	4	flow; correct?
5	Q. Similarly, would you agree that most polyalkylene		A. I'm sorry?
0 7	glycols contain more than eighteen carbon atoms?	6	Q. You testified that a pluronic water mixture does
7	A. Yes, sir.	7	not flow?
8	Q. And if your view were to prevail, most polyalkylene	8	A. And in so doing, I've always specified a
9	glycols covered from Claim 4 would be stricken from the	9	temperature at which that did not occur.
10	claim?	10	Q. At room temperature?
11	A. Yes, sir.		A. That's right.
12	Q. Let's talk about the term liquid for awhile,	12.	
13	Dr. Eisch Vouve tertified that physical in voter is a	13	room temperature does not flow, it's a gel rather than a
14	You've testified that phyronic in water is a	14	liquid?
15	gel, not a liquid; is that correct?	15	A. Yes, sur.
16	A. Yes, sir.	16	Q. Have you looked at what the patent says about the
17 18	Q. Am I correct that during your testimony on the term	17	term liquid?
	liquid, you did not cite to any technical references that	10	A. Which patent, sir?Q. The '558, for example.
19 20	contained definitions that supported your construction? A. Yes, sir. I did not give any exhibits in support	20	Q. The '558, for example.A. Would you direct me to what you want me to look at?
20		20	Q. Well, I'm asking you in general terms in your study
	Q. Are you familiar with the term paste?	1	of the '558 patent, did you focus on the language in
	A. Ure har remained with the reminhance:	44	of the 556 patting, the you tools on the language in

- 22 Q. Are you familiar with the term paste?
- 23 A. Yes, sir.
- 4 Q. How do you use the term paste?
- 25 A. I use it if I'm putting things in a picture book.
- 24 guidance as to how to construe the term liquid? 25 A. I certainly have examined the term liquid, yes.

23 either the specification or the claims to give you

	Page 42	•	Page 44
l	Q. Would you agree that it did not form the basis for	1	A. Yes, sir.
2	your testimony as to what the term means?	2	Q. So one or more of the liquid carriers is a flowable
3	A. I don't understand your question.	3	solution or paste?
4	Q. Well, you've defined liquid for us. Was that on	4	A. Yes, sir.
5	the basis of how the patent used the term liquid or how	5	Q. And in your terminology, a paste is more viscous
6	you and authoritative references used the term liquid?	6	than a liquid?
7	A. That would be extrinsic evidence. I certainly did	7	A. Yes, sir.
8	examine how, what information, if any, the patent gave me	8	Q. Now, are you aware that the patent, the '558 patent
9	about a liquid. But, again, finding that inadequate, I	9	defines the term flowable?
10	turned to other sources.	10	A. Yes, I am.
11	Q. Well, let's see how madequate it is.	11	Q. And do you recall that it defines the term flowable
12	Let's turn to Claim 7 of the '558 patent,	12	as shape sustainable, but readily deformable?
13	colume 7, line 25.	13	A. Yes.
14	A. (The witness complies.)	14	Q. So a flowable solution, according to the patent, is
15	Q. Am I correct, Dr. Eisch, that Claim 7 of the '558	15	something that is shaped sustainable, but readily
16	patent refers to various kinds of liquid carriers?	16	deformable; correct?
17	A. Yes, sir, you are.	17	A. Sir, if I may correct you, it talks about not a
18	Q. And these carriers in Claim 7 are selected in six	18	flowable solution, but a flowable composition.
19	categories?	19	Q. Would you agree that the term flowable is used as
20	A. Yes, that's right.	20	shapes sustainable but readily deformable?
21	Q. Two of those categories are Roman numeral IV and	21	A. Yes, sir.
22	Roman numeral V; correct?	22	Q. So in the context of a solution, flowable means
23	A. Yes.	23	shape sustainable, but readily deformable; correct?
24	Q. And those two categories of liquid carriers are	24	A. No, sir.
25	flowable solutions or pastes; correct?	25	Q. I see. But you would at least acknowledge that the
	· · · · · · · · · · · · · · · · · · ·		
	Page 43		Page 45
1	A. Yes, sir.	1	liquid carrier includes pastes; correct?
2	Q. So the claim itself has defined liquid to include	2	A. Yes, sir.
3	flowable solutions or pastes; correct?	3	Q. And paste can be more viscous than gels, correct?
4	A. I don't see that, sir.	4	A. I said before, it depends on what composition you
5	Q. The claim sets forth liquid carriers; is that	5	have. It could be more or less.
6	right?	6	Q. All right. So would you agree that the claim
7	A. No, it sets forth flowable compositions.	7	itself defines liquid to include materials such as
8	Q. The claim describes carriers as being selected from	8	pastes?
9	a member of the group consisting of liquid polyhydroxies,	9	A. Yes, sir.
10	liquid polyhydroxy compound esters, liquid solutions of	10	Q. Let's turn to the specification of the '558 patent,
11	solid polyhydroxy and liquid solutions of solid	11	column 3, lines 40 to 45.
12	polyhydroxy compound esters; correct?		A. (The witness complies.)
13	A. Yes, sir.	13	Q. And do you see there a discussion of liquid
		1 1 4	

- A. Q. Those are all liquids? 14
- 15 A. Yes, but we start with the --
- 16 Q. Dr. Eisch, I haven't asked?
- A. We start with the flow. 17
- 18 THE COURT: Excuse me.
- 19 MR. BROWN: Yes, ma'am.
- 20
- THE COURT: Go on.
- 21 BY MR. BROWN:
- 22 Q. Now, the claim proceeds to refer to these carriers,
- 23 the carriers identified as liquid carriers, and it
- 24 identifies among those carriers flowable solutions or
- 25 pastes; correct?

readily deformable; correct? A. That's how you define it in the patent, yes. 21

A. Yes, sir.

15 A. Yes, sir.

polyhydroxy compounds?

And flowable in the patent can range from materials 22 Q.

And does it in that passage refer to liquid

Q. Flowable is defined as shaped sustainable, but

polyhydroxy compounds as flowable liquids?

- that are puddies or pastes to materials that are runny, 23
- correct? 24

14

17

18

19

20

16 Q.

25 A. Yes, sir.

		1	
	Page 46		Page 48
	1 Q. So the patent itself defines liquid to constitute a	1	A. Yes, sir.
	2 range of materials that may extend from running materials	2	Q. Does Gensci advocate a definition for liquid that
	3 to paste-like materials; correct?	3	would exclude a mixture of pluronic and water at 4
	4 A. Yes, sir.	4	degrees centigrade?
	5 Q. Let's also look at the discussion of liquid	5	A. I don't know, sir.
	6 solution of solid polyhydroxy compounds which is found in	6	Q. Do you have any idea what the consistency of
	7 the '558 patent at column 4, lines 33 to 38.	7	pluronic water at 4 degrees centigrade?
	8 A. (The witness complies.)	8	A. By my own observation, it looks a lot like glycerol
	9 Q. Perhaps we could extend the window up just a	9	at room temperature.
1	0 little.	10	Q. Rumy?
1	1 Now, do you see in that passage, Dr. Eisch,	11	A. Well, I wouldn't call it runny. There's a definite
1	2 reference to where the polyhydroxy compound is a solid?	12	viscous nature to it.
]	3 A. Yes, sir.	13	Q. Readily deformable?
1	4 Q. A solvent such a water may be mixed with it to	14	A. If you want to call it that, yes.
	5 provide a, quote, flowable solution or paste, end quote,	15	Q. Now, your opinion as to the meaning of the term
	6 of the compound?	16	liquid is based largely on your experience as an academic
	7 A. Yes, sir, I see that.	17	chemist?
]	8 Q. So again, the patentee has addressed the term	18	A. And consultation of technical dictionaries.
1	9 liquid and has referred to or defined the term liquid as	19	Q. Did you offer any of those technical dictionaries
1	0 a flowable solution or paste; correct?	20	during your testimony?
1	1 A. I'm not sure, sir.	21	A. No, sir. I much admit I didn't. I thought it was
1	2 Q. Am I correct that Gensci advocates a definition for	22	such a straightforward term.
1	3 liquid that would exclude a mixture of pluronic in water?	23	Q. And would you agree that your definition of the
2	4 A. For a liquid, sir? No, they do not advocate that.	24	term liquid is not based on a survey on how those who
1	5 Q. So is it your testimony that a mixture of pluronic	25	work with bone graft materials day in and day out use the
		T	

Page 47

in water at room temperature is a liquid? 1 1 term: correct? 2 A. No, it is not. 2 A. That's correct, yes. 3 Q. Right. So then perhaps if I - you misunderstood 3 Am I correct that you don't work with bone graft Q. my question or I miss phrased it, but am I correct that materials? 4 4 you and Gensci take the position that the term liquid That's correct. 5 Α. 5 would exclude from its scope a mixture of phironic in Did you attempt to determine whether Gensci, as a 6 6 **O**. participant in the field of bone graft materials, uses 7 water? 7 8 At room temperature. 8 the term liquid in a way that is consist with its Α. 9 9 definition of the term in this litigation? All right. Q. 10 THE COURT: Stop now. We're going to take a 10 No, I have no knowledge on that. A. Well, you mentioned during testimony, Dr. Coleson 11 break. 11 Q. 12 MR. BROWN: Very well, your Honor. 12 and Dr. Clochi; do you recall that? 13 THE COURT: You had best ask that questions A. Yes, sir. 13 Would who's Dr. Coleson? 14 again when we come back. 14 Q. He is, I believe, a director of research for Gensci 15 MR. BROWN: We'll heed the Court's advice, 15 **A**. and Dr. Camron Clochi, I believe, is an oral surgeon. 16 your Honor. 16 Affiliated with Gensci? 17 (Recess.) 17 **O**. 18 THE COURT: Go on. 18 A. I think he was at one time had some affiliation. I don't know if that is ongoing or not. 19 MR. BROWN: Thank you, your Honor. 19 And Is it your understanding go he's the individual 20 I hope I remembered the right question. Let 20 Q. responsible for the phironic and water mixture? 21 me try this, Dr. Eisch. 21 Yes, that's my understanding. 22 BY MR. BROWN: 22 A. 23 Q. Am I correct that you and Gensci advocate a 23 Q. And so you would agree that both Dr. Coolson and 24 Dr. Clochi work in the field of bone graft materials? definition for liquid that would exclude a mixture of 24 25 A. Yes, I think that's correct. pluronic in water at room temperature? 25

Page 49

	Page 50		Page 52
1	Q. Now, based on your definition of the term liquid,	1	talked about here.
2	you've said that phuronic and water at a room temperature	2	Q. All right. But it indicates that poloxamer, which
3	would not be a liquid; right?	3	we know as pluronic in water is a fluid liquid at room
4	A. Yes, sir.	4	temperature.
5	Q. But when Dr. Coleson and Dr. Clocki and Gensci	5	A. And let's not forget sol. They do call it a sol.
6	refer to pluronic and water, they refer to it as a	6	sir.
7	liquid; correct?	7	Q. But it uses the term liquit; correct?
8	A. Yes, sir, they do.	8	A. And also the term sol, yes, sir.
9	Q. Let's look at some of those examples. Trial	9	Q. A fluid liquid sol, but at higher body
10	Exhibit 34.	10	
11	A. (The witness complies.)	10	temperatures, it's a viscous liquid, but in both cases, it is a liquid; correct?
12	Q. If we can focus in on the abstract left-hand column	11	A. That is the usage here, yes.
12	about ten lines down that starts with when disolved in	12	Q. And that's the usage by those who work in this
14	water?	14	field day in and day out; correct?
15	Do you have that passage in front of you?	15	A. Well, this is one instance of it, sir. I have not
16	A. Yes, I do.	16	the information of the survey of which you speak.
17	Q. Would you direct me to which line it is?	17	Q. So would you agree that Gensci even recognizes that
18	Q. Yes, it's eight lines down.	18	is gels are liquids?
19	A. Yes, I have - when dissolved in water, yes.	19	A. If we take these two gentlemen as being of
20	Q. And it read, quote:	20	representative of Gensci, yes.
21	"When dissolved in water the poloxamer	21	O. Let's turn to Exhibit 93.
22	demonstrates reverse	22	A. (The witness complies.)
23	I apologize, your Honor	23	MR. BROWN: Backing up for a minute, your
24	THE COURT: That's all right.	24	Honor, I offer Exhibit 34 in evidence.
25	MR. BROWN: All right, now you and I can read	25	THE COURT: Yes.
-	Page 51		Page 53
1	this.	1	BY MR. BROWN:
2	It read, quote:	2	Q. Now, turning to Exhibit 93, Dr. Eisch, are you
3	"When dissolved in water the poloxamer	3	familiar with that patent?
4	demonstrates reverse thermal behavior, since at low	4	A. Yes, I am
5	ambient temperature, it is a fluid liquid, but at	5	Q. That is the 555 - '558 patent by Canron Clochi?
6	higher body temperatures it forms a viscous liquid	6	A. Yes.
7	gel." End quote.	7	Q. And you understand that that patent is directed to
8	A. You omitted word sol.	8	the use of phironic in water?
9	Q. You're quite right, and I apologize for that.	9	A. Yes, sir.
10	But other than that, did I read that passage	10	Q. Or in this case an application involving dental
11	correctly?	11	inplants?
12	A. I got that right, yes.	12	
13	Q. And that passage comes from an article that was	13	Q. And am I correct, Dr. Eisch, that in this patent
	and the Des Colores and Clarks and Colores and	1 1 4	The Clashingford to Later and if I am find the

- 14 prepared by Drs. Coleson and Clochi of Gensci; correct?
- 15 A. Yes, sir.
- 16 Q. And that are in that article talking about the
- poloxamer pluronic F127; correct? 17
- 18 A. Yes, sir.
- 19 Q. They're talking about the very material that is
- 20 used in their dynagraph product?
- 21 A. I'm not sure, sir, if they're talking about the
- very same concentration. I'm under the impression that 22
- 23 the dynagraph product is 25 percent by weight of pluronic
- 24 and water.
- 25 I don't know what concentrations are being

A. Could you show that to me, please.

precise language. He says that:

at about 37 degrees."

14 Dr. Clochi refers to - let's see if I can find the

Q. I will try to do so, Dr. Eisch. I apologize for 19

"The carrier is a liquid which will gel

- 20 the quality of this copy.
- 21 If we look -- this isn't precisely the passage, but if we look at column 2, line 18.
- 22
- 23 A. Can you blow that up? Okay.
- Q. I'm sorry, that's not -- that's not the right 24
- 25 passage.

 defect. Do you see that language? A. Yes, sir, I do. MS. WAACK: We have an objection to this document for lack of foundation. THE COURT: This is? 	18 19 20 21 22 23	THE COURT: Go on. BY MR. BROWN: Q. And it says that the composition has a gel consistency; correct? A. Yes, sir.
	We'll look at the abstract, which appears on the cover page of the patent. Now, that's not it All right. Well, I won't take any further time with this exhibit. BY MR. BROWN: Q. Could you please turn to Exhibit 517, page 6, lines 23 to 32. Well, first of all, do you recognize Exhibit 517, Dr. Eisch? A. Yes, I do. Q. And do you recognize that as an European patent application filed by Gensci? A. Yes, sir. Q. With Dr. Clochi as the inventor? A. Yes, sir. Q. And do you understand that patent is directed to an invention that includes within its scope the products die graph products? A. Yes. Q. Now, this passage reads, quote: Page 55 "In proffered embodiments of a composition of a present invention, the carrier is a liquid diluted in a solvent or a solid dissolved in a solvent Now, that's not the passage either. We're on the wrong page, it's page 40, lines 19 through 15. THE COURT: Now, let me see what we're doing here. This is? This is? MR. BROWN: We're focusing on a patent application file by Gensci with Dr. Clochi as the inventor directed to the dynagraph product. Q. And on page 4 of that document do you see a description of that's called preferred modes? A. Yes, sir. Q. And it says when referring - when describing the dynagraph product, that the composition of the present	MR. BROWN: May I have a moment, your Honor? THE COURT: Yes, certainly. (Pause in the proceedings.) MR. BROWN: Thanks to my able assistant, we found it. We'll look at the abstract, which appears on the cover page of the patent. Now, that's not it. All right. Well, I won't take any further time with this exhibit. BY MR. BROWN: Q. Could you please turn to Exhibit 517, page 6, lines 23 to 32. We'll, first of all, do you recognize Exhibit 517, Dr. Eisch? A. Yes, I do. Q. And do you recognize that as an European patent application filed by Gensci? A. Yes, sir. Q. And do you understand that patent is directed to an invention that includes within its scope the products die graph products? A. Yes. Q. Now, this passage reads, quote: Page 55 "In proffered embodiments of a composition of a present invention, the carrier is a liquid diluted in a solvent or a solid dissolved in a solvent - Now, that's not the passage either. We're on the wrong page, it's page 40, lines 19 through 15. THE COURT: Now, let me see what we're doing here. This is? This is? MR. BROWN: We're focusing on a patent application file by Gensci with Dr. Clochi as the inventor directed to the dynagraph product. Q. And on page 4 of that document do you see a description of that's called preferred modes? A. Yes, sir. M. BROWN: We're focusing on a patent application file by Gensci with Dr. Clochi as the inventor directed to the dynagraph product. Q. And on page 4 of that document do you see a description of that's called preferred modes? A. Yes, sir. Q. And it says when referring – when describing the dynagraph product, that the composition of the present 16

	Page 62		Page 64
' 1	the art would read this patent, you would defer to them,	1	and Gensci have defined it, excludes pluronics in water?
$\overline{\mathcal{O}}$	correct?	2	A. Yes, sir.
12	A. Well, ordinary skill in the art insofar as I	3	Q. Let's see if your definition and Gensici's is
4	wouldn't put in on simply bone material, but certainly	4	consistent with Gensci's own usage of the term as a
5	polymer chemistry and general chemistry enters into the	5	participant in the field of bone graft materials. Let's
6	material embodied in these patents. And so I think a	6	turn to Trial Exhibit 410.
7	person of ordinary skill in the art in chemistry,	7	Have you seen Exhibit 410 before, Dr. Eisch?
8	including polymer chemistry would certainly have	8	A. Yes, sir.
9	something to say about how these terms are to be used.	9	Q. Do you understand that it is what's called an SOP
10	Q. But Drs. Clochi and Coleson clearly considered gels	10	or a standard operating procedure at Gensci?
11	to be liquids at room temperature; correct?	11	A. Yes, I understand that.
12	A. That's what it says here, yes.	12	Q. And that standard operating procedure is used in
13	Q. So are you suggesting that they're not persons of	13	this case to - for the production of dynagraph gel and
14	ordinary skill in the art?	14	puddy?
15	A. Not in an ordinary skill in the art of chemistry,	15	A. Yes, sir.
16	in polymers chemistry, sir.	16	Q. So this is a document that would evidence how
17	Q. Even though they are the ones who are making the	17	Gensci uses the term solution, if, in fact, that term is
18	product; correct?	18	found in the document; correct?
19	A. That's right, sir.	19	Yes, sir, to a certain audience.
20	Q. Let's turn to the term solution.	20	Let's turn to paragraph 4 of Exhibit 410.
21	As with liquid, your definition of a term	21	And am I correct that in paragraph four Gensci
22	solution is based on your experience?	22	describes a GPX solution and then defines that GPX
23	A. And textbook knowledge thereof such as the	23	solution as a, quote:
24	textbooks in physical chemistry which were cited earlier	24	"Solution containing a mixture of
25	in my testimony.	25	phironic F127 and sterile water for irrigation or
(
			· ·
	Page 63		Page 65
1	Q. You don't rely at all in language in the patent to	1	equipment." End quote.
2	construe the term solution; do you?	2	Correct?
3	A. One certainly takes that into account.	3	A. Yes, sir.
4	Q. During your testimony, did you indicate in what	4	Q. So am I correct that Gensci in this document has
5	way, if at all, you relied on the language in the patent	5	ascribed or given the meaning - has given the term
6	to construe the term solution?	6	solution a meaning that would include within its scope a
7	A. I said that I took the use of the word solution in	7	mixture of phuronic an water?
8	its ordinary technical sense, and hence I thought it	8	A. Yes, sir, to the limited audience for which it was
9	based upon what would be in a physical chemistry	9	meant.

- textbook. 10
- 11 Q. So in other words, you did not rely on the patent
- to give you any guidance as to how to construe the term 12
- solution; correct? 13
- A. No, that's not correct. (4
- Q. Does your opinion on the term solution take into 17 16 account how those who work in the field of bone graft
- materials use the term solution? 17
- No, it does not. 18 A
- And you and Gensci advocate a definition for the 19 Q.
- 20 term solution that would exclude a mixture of pluronic in 21 water, is that correct?
- A. It would make a distinction from them, clearly, 22
- 23 based upon known principles of solution and colloid
- chemistry, yes, sir. 24
- 25 Q. Is it your position that the term solution, as you

- 10 Q. And that limited audience is those people actively engaged in the practice of making bone graft materials
- 11 for the industry, correct? 12
- No, sir, it is the technicians with high school 13 **A**.
- educations who are carrying out a procedure. 14
 - MR. BROWN: We offer at this time Exhibit 410 in evidence, your Honor.
 - THE COURT: Yes.
- 17 BY MR. BROWN: 18

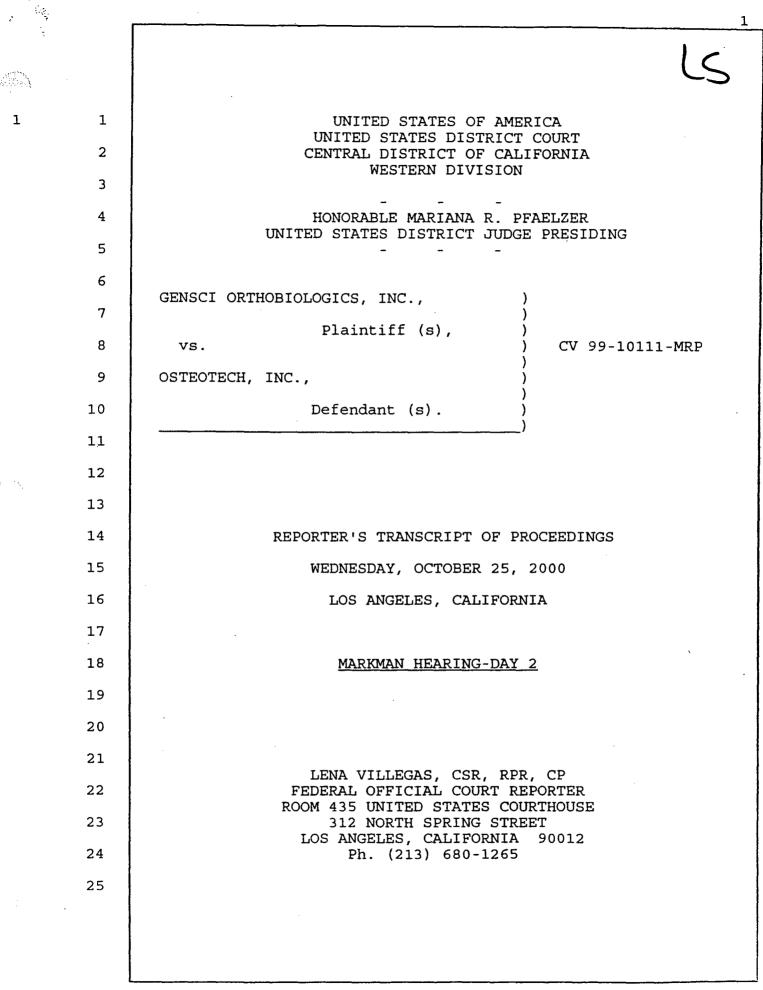

- 19 Let's turn to trial Exhibit 25? **O**.
- (The witness complies.) 20 A.
- Do you recognize Trial Exhibit 25, Dr. Eisch? 21 Q.
- Yes, I do. 22 A.
- This is a page out of Dr. Poleson's notebook? 23 Q.
- Yes. sir. 24 A.
- 25 Q. And am I correct -- well, let's focus in on the top

1	Page 66		Page 68
•	of the page.		Q. We're not on the right page. I apologize, let's
3	And you clearly had read this passage before you gave testimony yesterday; right?	2	see if we can find it page 2.
4	A. Yes, sir.	3	And at page two, line 5, let's focus in
5	Q. And that was what prompted you to say that the		All right, backing up for a minute, you
6	that the individuals such as doctors Coleson and Clochi	5	understand that this is a standard operating procedure
7	used the term solution in a way with which you don't	7	for Gensci?
8	agree; correct?	8	A. Yes, sir, I do.
9	A. I said they use it in a man-on-the-street way as a	9	Q. And it's prepared for the purpose of producing the
10	shorthand, instead of going and writing out the whole	10	product dynagraph gel and puddy? A. Yes, I do.
11	phrase, colloidal suspension or dispersion.	11	
12	Q. So Dr. Coleson, the man, the proverbial man on the	12	Q. So this is the way that the people actively involved in making the product use the term such as
13	street, has referred to a lot of PLF127 as a solution in	13	solution; correct?
14	that passage; correct?	14	A. Right, the technician, yes, sir.
15	A. Yes, sir.	15	Q. And in this case, in line 5 it says, quote:
16	Q. And PLF127 refers to phironic 127; correct?	16	"Keep solution at one to ten degrees
17	A. Yes, sir, I think so.	17	centigrade. Disregard GPX solution if it turns
18	Q. Now, Dr. Coleson isn't a lab technician; is he?	18	cloudy or is passed expiration date," end quote.
19	A. Well, when it comes to the chemical background, he	19	Correct?
20	might be on that level, yes.	20	A. Yes, sir.
21	He's really, I understand, a biologist, and in	21	Q. And so we have another example where Gensci is
22	that level, he's not the man on the street. But when	22	using the term solution to describe phironic in water
23	he's talking chemical language, he might appear like a	23	A. Right, for audience of technicians.
24	man on the street.	24	Q. You referred earlier in your testimony to starch in
25	Q. So are you suggesting that the people who read the	25	water as a solution; do you recall that?
1	Page 67 patents directed to bone graft materials must approach	1	Page 69 A. I said in common parlance, starch, it's called a
1 2 3 4 5 6 7 8 9	 patents directed to bone graft materials must approach them with a Ph.D. in order to give proper meaning to the terms used in the patent? A. Well, they must approach him with ordinary skill in the art; must they not? Q. And you don't think that Dr. Coleson has ordinary skill in the art when he uses the term solution? A. He has more than ordinary skill in the art when it comes to bone preparation. But when we're taking about 	1 2 3 4 5 6 7 8 9	 A. I said in common parlance, starch, it's called a starch solution, but in actuality, it's really an colloidal dispersion. Q. Starch with a polysaccharide; correct? A. Oh, yes, sir. Q. So starch in water is an example of a polysaccharide in water that is called a solution; correct? A. You misquote me. I said it's called an colloidal

BROWN: Q. Please turn to Trial Exhibit 23. 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 A. I said in common parlance, starch, it's called a starch solution, but in actuality, it's really an colloidal dispersion. Q. Starch with a polysaccharide; correct? A. Oh, yes, sir. Q. So starch in water is an example of a polysaccharide in water that is called a solution; correct? A. You misquote me. I said it's called an colloidal dispersion in technical language. The man on the street might call it a solution but only the man or woman on the street. Q. And someone such a Dr. Coleson? A. I don't know what he calls it. I had no occasion to see what he calls it. Q. Would you acknowledge that it's common even in technical publications to refer to polysaccharides in water as solutions? A. In what kind of publications, sir? Q. Technical publications.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 patents directed to bone graft materials must approach them with a Ph.D. in order to give proper meaning to the terms used in the patent? A. Well, they must approach him with ordinary skill in the art; must they not? Q. And you don't think that Dr. Coleson has ordinary skill in the art when he uses the term solution? A. He has more than ordinary skill in the art when it comes to bone preparation. But when we're taking about the chemical aspects of his background, he might not be one of ordinary skill in the art. Q. We'll see what Dr. Coleson has to say about that later. Let's refer to - MR. BROWN: I'm sorry, did I offer Exhibit 25 in evidence? I do so at this time, your Honor? THE COURT: These may come in. BY MR. BROWN: Q. Please turn to Trial Exhibit 23. Do you realize trial Exhibit 23? 	3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 A. `	kind of language would be caught by the referee system	1	MR. BROWN: For the middle of the page it
4	and would not be permanented to emerge in print.	2	reads, quote:
3	Q. Are you familiar with a treatise called the	3	"There are of course some molecules that
4	foundations of colloid science?	4	are individually larger than one nanometer in size.
5	A. Yes, I believe that's one of those.	5	These macro molecules can often be uniformly
6	Q. And Dr. Hunter is the primary author of that	6	dispersed through a fluid medium, and they then form
7	publication?	7	a colloidal solution or dispersion. Proteins,
8	A. Yes, sir.	8	polysaccharides, like in starge and many synthetic
9	Q. And, in fact, isn't that one of the exhibits that	9	polymers fall into this category," end quote.
10	you selected for this hearing?	10	BY MR. BROWN:
11	A. Yes, sir.	11	Q. So here's an example, Dr. Eisch, of the learned
12	Q. Would you please turn to Exhibit 1549, tab X, in	12	treatise that refers to starch in water as a solution;
13	Gensici's notebook.	13	correct?
14	A. Oh, I'm sorry, yes, I do. Which tab was that, I'm	14	A. Oh, you forget the adjative colloidal that must
15	sorry?	15	modify it.
16	THE COURT: 1549.	16	Q. So you're saying that colloidal must always be used
17	MR. BROWN: X.	17	in conjunction when referring to a starch solution?
18	THE WITNESS: X.	18	A. I'm saying that that's what is done here.
19	MR. BROWN: Your Honor, do you have a copy?	19	Obviously, the editor of a treatise is not
20	THE COURT: No.	20	going to get caught in sloppy language. He does not call
21	MR. BROWN: May I hand the Court.	21	it simply a solution. He calls it a colloidal solution,
22	We do not have the visual on that, your Honor,	22	and then to be more correct in accordance with, he then
23	because it has a Gensci exhibit.	23	says in place of a solution, we will be reading
24	THE COURT: I have the book right now.	24	dispersion. So he's really talking about a starch in
25	MR. BROWN: Let me see if I can proceed	25	water as being a colloidal dispersion.

It reads, quote: "There are, of course, some molecules that are individually larger than one manometer in size. These macro molecules are often be uniformly dispersed through a fluid medium. And they then form an colloidal solution or dispersion, proteins, polysaccharides, like starch, and many polymers fall into that category. End quote. Did I read that passage correctly? A. Yes, sir, you got it right. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 Q. Well, isn't it quite common to hear people describe colloidal dispersions a solutions? A. Not in correct speech. Q. I'm not talking about correct speach, Dr. Eisch. I'm talking about whether it's common for people who work with chemicals. Whether they be bench people or Ph.D.'s, don't they in every day language refer to many colloidal dispersions as simply solutions? A. Well, if you're in a position of such a survey, sir, I'd like to share it with you. I would say that careful language in scientific discussions uses proper terminology. There's always a jargon or casual reference that could occur in discussions. But in formal discussions and in writing one uses proper terminology. Q. Is pluronic in water a colloidal dispersion? A. Yes, sir. Q. Isn't it common to refer to pluronic in water as a solution?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 with - no. BY MR. BROWN: Q. Would you please turn to page 441 of that exhibit, Dr. Eisch. A. Yes, sir, I have it. Q. And toward the middle of the page do you see the paragraph that starts with the words "There are of course some molecules" A. Yes, sir. Q. Allow me to quote that paragraph. It reads, quote: "There are, of course, some molecules that are individually larger than one manometer in size. These macro molecules are often be uniformly dispersed through a fluid medium. And they then form an colloidal solution or dispersion, proteins, polysaccharides, like starch, and many polymers fall into that category. End quote. Did I read that passage correctly? A. Yes, sir, you got it right. Q. It's Exhibit 1549, tab X. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 Q. Well, isn't it quite common to hear people describe colloidal dispersions a solutions? BROWN: May I approach the witness, your Honor? THE COURT: Yes. BY MR. BROWN: Q. Dr. Eisch, I'm handing you Hawley's condensed chemical dictionary, 13th edition. A. What year? Q. From 1997. A. Okay. Q. Is that sufficiently current?

	Page 78
1	foundation. The witness just testified he hasn't seen in
	before. And we haven't been provided a copy.
3	THE COURT: You'll have to ask him some
4	foundational questions.
5	BY MR. BROWN:
6	Q. Well, I think you testified yesterday, Dr. Eisch,
7	that you recognized Hawley's as one of references that
8	you would refer to in formulating or construing terms of
9	art, is that -
10	A. Terms of chemical nature.
11	Q. Terms of a chemical nature?
12	A. Right.
13	
14	· · · · · · · · · · · · · · · · · · ·
15	the term solution is not of a chemical nature. It's of a
16	
17	Q. Well, with that qualification, you've used the book
18	· · ·
19	
20	
21	your testimony on the polyhydroxy?
22	-
23	MR. BROWN: May I hand it to the witness?
24	THE COURT: Show it do you want to see it?
25	Well, you look at it, and we'll stop now.

UNITED STATES DISTRICT COURT

•

1 AFTERNOON SESSION 2 (COURT IN SESSION at 1:00 p.m.) 3 THE COURT: Will the witness take his seat. MR. BROWN: May I'm take care of some housekeeping 4 5 matters? THE COURT: Yes. 6 MR. BROWN: I'd like to offer some documents in 7 evidence that I overlooked. First is Exhibit 175, the '558 8 9 Patent. Second is Exhibit 319 which is the excerpt from The 10 Dictionary of Biochemistry and Molecularbioloby. 11 The third is the Websters Ninth New Collegiate 12 Dictionary, Exhibit 321. The fourth is the Clokie 5,503,558 Patent which was marked as Exhibit 93. 13 14 THE COURT: I don't remember that. What is that? 15 MR. BROWN: That is the Patent by Cameron Clokie 16 directed to pluronic in water mixture. 17 THE COURT: Yes. MR. BROWN: And the last is Exhibit 106 which is an 18 19 article prepared by the Drs. Clokie and Coulson entitled Justification for the use of Poloxamer 407. 20 21 THE COURT: Yes. 22 MR. BROWN: I've placed up on the Bench, your Honor, 23 a copy of Exhibit 719 and provided the witness with one as 24 well. 25 THE COURT: Condensed to the Hawley's?

1

(A)	
_ 1	MR. BROWN: Yes, it is.
2	BY MR. BROWN:
3	Q. Have you had an opportunity to let's bring up
4	Exhibit 710. And turn to the coloidal solution page and
. 5	highlight that passage.
6	Do you see page 1034 of Hawley's Chemical Condensed
7	Dictionary reference to coloidal solutions?
8	A. Solutions Colloidal, yes, sir.
9	Q. Right.
10	And that's interesting. It's under the term solution
11	followed by the term, Colloidal, correct?
12	A. That's correct.
13	Q. And then immediately beneath that definition, there's
14	another reference to solution, but followed by the term,
15	true, correct?
16	A. Yes, sir.
17	Q. So Hawley's is referring to both of these as solutions,
18	true solutions and Colloidal solutions, correct?
19	A. Yes.
20	But I suggest that the text of the definitions be
21	read through.
22	Q. All right. Let's do that.
23	Colloidal Solution.
24	Quote: A liquid Colloidal dispersion is often called
25	a solution since Colloidal particles are larger than

· . .

molecules, it is strictly incorrect to call such dispersions 1 2 solutions, however, this term is widely used in the literature, end guote. 3 4 Did I read that correctly? 5 Α. Yes, sir. 6 0. And would you agree with Hawley's statement that that 7 term solution is widely used in the literature to refer to Colloidal dispersions? 8 9 Α. I have no direct knowledge of that, sir. Now, this morning, you testified that polysaccharides 10 ο. have more than 18 carbons in them, correct? 11 12 Α. Yes, sir. 13 Are most polysaccharides at room temperature solids? Q. 14 Α. Yes, sir. Invariably. 15 And would it also be true that those polysaccharide Q. 16 solids, when placed in water, would form a Colloidal 17 dispersion? Most would, yes, sir. 18 Α. 19 Q. All right. Let's turn back to claim four of the '558 Patent. 20 21 And again, Claim Four refers to various liquid 22 carriers, correct? 23 Α. Yes, sir. 24 And among the liquid carriers within the scope of the ο. 25 claim are polysaccharides, correct?

1

Α. Yes, sir. 1 2 But I don't see the phrase, liquid carriers, as such. 3 I see liquid solutions or liquids. I don't see liquid 4 carriers. 5 Well, the preface to the Wherein clause refers -ο. 6 reads: ... the carrier being selected from a member of the group consisting of liquid polyyhydroxy compound, liquid 7 polyhydroxy compound ester, liquid solution of solid 8 9 polyhydroxy compound, and liquid solution of solid 10 polyhydroxy compound esters and mixtures thereof. Right? 11 12 Α. Yes, sir. 13 All right. Q. 14 And we've established that polysaccharides at room 15 temperature are typically solids, correct? 16 Yes, sir. Α. So if one were to use a polysaccharide within the scope 17 0. of claim four, it would be in the form of a liquid solution 18 of a solid polyhydroxy, correct? 19 20 A. No, sir. Claim four specifically recites examples of 21 0. polysaccharides as being carriers, correct? 22 23 Α. Yes, sir. If polysaccharides are carriers, and polysaccharides 24 Ο. 25 are solids at room temperature, and carriers are liquids,

1

	-
1	the only way a polysaccharide can be a carrier is if it
2	dissolved in water, correct?
3	A. No, sir.
4	I I differ with your use of dissolved.
5	Q. Would you agree that a polysaccharide in water is not a
6	liquid polyhydroxy compound?
7	A. Say that again, sir.
8	Q. Would you agree that a polysaccharide dissolved in
9	water is not a liquid polyhydroxy compound?
10	A. You mean the resulting composition?
11	Q. Right?
12	A. Well, the resulting composition we, I guess, have
13	agreed is a liquid.
14	Q. It's your position that as this claims reads, there's
15	no way that one can use a polysaccharide as a liquid
16	carrier; isn't that the bottom line?
17	A. Yes, sir.
18	Q. All right.
19	Let's look at the '176 Patent.
20	And backing up, that's your position even though
21	polysaccharides uniformly have more in than 18 carbons,
22	correct?
23	A. Yes, sir.
24	Q. Let's go to Exhibit 176, column seven, line 60 to 68.
25	What is dextran?

·

1	A. It's a polysaccharin.
. 2	Q. And it's a solid at room temperature?
3	A. Yes, sir.
4	Q. So in examples four and five, the Patentee is
5	describing a dextran solution; is that correct?
6	A. Would you put on, also, the top of the next column
7	which gives the composition and for the first time mentions
8	that water is involved here.
9	Q. Sure.
10	A. Now, again your question was
11	Q. Is this passage referring to dextran in water?
12	A. Dextran with water, yes, sir
13	Q. Right.
14	And we know that dextran alone is a solid?
15	A. Yes, sir.
16	Q. So this use of dextran in water is an example
17	A. With water, sir.
18	Q. It's In water, right?
19	THE COURT: No. He said with water.
20	BY MR. BROWN:
21	Q. It's mixed with water, isn't it?
22	A. Yes.
23	But I would agree that what you get is dextran with
24	water. When you say, in water, that somehow implies that it
25	is in solution.

1.2. C

	- ·
1	Q. All right. It's dextran mixed with water?
2	A. Yes, sir. We can agree n that.
3	Q. And the patentee has chosen to give an as an example of
4	his invention a mixture of dextran in with water used
5	with demineralized bone powder, correct?
6	A. Yes, sir.
7	Q. But you would take the position that dextran with water
8	is not a liquid solution of a solid polyhydroxy compound?
9	A. Yes, sir, I would take that position.
10	Q. So it's your position that examples four and five of
11	the '655 Patent are examples that don't fall within the
12	scope of the patent, correct?
13	A. That's correct, the way I read or construe the patent.
14	Q. So you think the patentee chose to give an example that
15	isn't within the scope of the claims because of the way the
16	term solution is defined, correct?
17	MS. CONSALVI: Objection; foundation.
18	Are you referring to the pending claims as filed?
19 .	MR. BROWN: I withdraw the question.
20	BY MR. BROWN:
21	Q. Let's turn to acyclic polyhydric alcohols, Dr. Eisch.
22	We're making progress. Maybe not as quickly as I had
23	intended and I apologize for that.
24	In your testimony, I think you said, and I'm sure
25	you'll correct me if I'm wrong, that polyhydric alcohol is

Sug 8

1	equivalent to polyhydroxy?
2	A. Yes, sir.
3	Q. Would you agree that the term polyol also is synonymous
4	with the term polyhydroxy?
5	A. Yes, I would so agree.
6	Q. Do you agree that a polyol is an alcohol?
7	A. Yes. The ending, o-l, is indicative of that.
8	Q. Yes.
9	And in fact, isn't the origin of polyol from
10	polyalcohol?
11	A. No. The origin of the o-l is from the German, uhl,
12	which means oil.
13	Q. All right. I defer to you on that, Dr. Eisch.
14	You refer to Hawley's again for the proposition that
15	a polyol is synonymous with the term polyhydric alcohol,
16	correct?
17	A. Yes, sir.
18	Q. Have you ever heard pluronic referred to as a polyol?
19	A. No, I cannot recall seeing that.
20	Q. Let's look at trial Exhibit 475.
21	Q. Are you familiar with this treatise on Nonionic
22	Surfactants by Martin Schick?
23	A. Yes, since this legal action.
24	Q. Have you examined this reference to see how what
25	the nature of the discussion of pluronics in this text?

.

1	A. I recall examining this in the index, especially as to
2	the whether in fact this reference, as Osteotech asserts,
3	makes synonymous polyoxyalkylene and polyalkylene glycols.
4	That's the only context in which I recall.
5	Q. As between you and Dr. Schick, would you defer to
6	Dr. Schick in terms of knowledge of pluronic?
. 7	A. I don't know the man's background. He's the editor of
8	this and, hence, I don't know what his contribution to this
9	collection is.
10	Q. Let's turn to the ninth page of Exhibit 475, and there,
11	we're looking at a chapter by Irving Schmoka (ph.), correct?
12	A. I see his name on the top, yes, and somewhere within
13	the chapter; is it not?
14	Q. And did you do know that Irving Schmoka was heavily
15	involved in the developments of pluronics?
16	A. Yes, sir, I recognize that.
17	Q. Let's focus on page 313, middle paragraph. And do you
18	see there Dr. Schmoka refers to pluronic polyols.
19 ·	A. Yes, sir, I see it.
20	Q. So that's one example where someone with considerable
21	knowledge of pluronics has chosen to refer to pluronic has a
22	polyol, correct?
23	A. Right.
24	But it's at this point I would like to call attention
25	to the date of this compilation. It's 1966, 34 years ago.

1	Q. So you think it's out of date?
2	A. It could, conceivably.
3	Q. All right.
4	Well, then, let's then look at Exhibit 32.
5	MR. BROWN: Backing up, I offer Exhibit 475 into
6	evidence.
7	THE COURT: Yes.
8	BY MR. BROWN:
9	Q. You've seen Exhibit 32 before, Dr. Eisch?
10	A. Yes.
11	Q. And you understand
12	A. I think this is this an internal document of GenSci?
13	Q. Yes?
14	A. Yes.
15	Q. And if we focus on the second paragraph of the
16	document, do you see that even GenSci refers to pluronic as
17	a polyol?
18	A. Yes, sir, I see that.
19	Q. They refer to, quote, certain blocked copolymer polyols
20	exhibit reverse phase properties, end quote?
21	A. Yes, sir.
22	Q. And they're referring to pluronic, correct?
23	A. Yes, sir.
24	Q. Let's look at Exhibit 70.
25	MR. BROWN: I offer Exhibit 32 into evidence.
	•

*

1	THE COURT: Yes.
2	BY MR. BROWN:
3	Q. Do you recognize Exhibit 70, Dr. Eisch?
4	A. Yes, I have seen this. And when I examined it, I
5	looked in vain for a date. Can you provide that.
6	Q. I can't unless it's on the document, itself.
7	But is there any question as to what this document
8	is, Dr. Eisch?
9	A. It's technical data from the BASF Corporation whose
10	brochure we gave testimony on earlier in which we could not
11	find this term. And so that's why I wonder on such a
12	document from the same corporation that now this terminology
13	emerges.
14	Q. Well, now, your testimony this morning was that you
. 15	couldn't find the term polyalkylene glycol, wasn't it?
16	A. Right.
17	I looked at the same time. I can now add for
18	assurance that I looked for any variant of that, like,
19	polyol.
20	Q. The title of this document is pluronic polyol gels; is
21	that correct?
22	A. yes, sir.
23	Q. BASF is, as you know, is the manufacture of pluronic?
24	A. Yes, sir.
25	That's why I'm confused because in a very recent

Note C

3

brochure, the term is not used. And here, you produce a 1 2 document where it was used. And I so I wonder about its 3 date. 4 Q. All right. 5 Well, let me see if I we can deal with your concern about dates. Let's turn to turn to Exhibit 370. 6 7 Are you familiar with this treatise on Nonionic 8 surfactants where Nace is the editor? 9 Α. I believe that was submitted as part of your exhibits; 10 was it not? 11 Yes, it was. Q. 12 Α. That is in truth the first time I became acquainted with it. 13 14 Did you review the exhibit? Q. 15 Α. Yes, I did. And did you understand that this treatise was directed 16 Q. to Nonionic Surfactants, including polyols? 17 18 Α. I believe that's my understanding, yes. 19 0. And the treatise further discussed pluronics as particular kind of nonionic surfactant? 20 21 Yes, sir. Α. 22 Can you give me a date on this one? 23 0. Yes. I think you have the exhibit. The seconds 24 indicates it's page copyrighted 1996? 25 That's in this pile? Α.

3

1 It should be? ο. 2 Which Exhibit number is it? Α. Exhibit 60. 3 Q. 4 I'm sorry. Exhibit 370. Is it the date that you want to look at, Dr. Eisch? 5 6 Α. Well, I just wanted to look at the document, too, as 7 long as we're on the subject. 8 ο. Sure. Sure. 9 Α. Okay. I have it. But you will note that in the title, in apposition to 10 11 Nonionic Surfactants, it names them correctly by calling 12 them polyoxyalkylene block copolymers. And that's the 13 designation of greatest prominence on the title page. 14 0. I'm not asking you about the title page, Dr. Eisch. 15 Α. I know you're not. But I wanted to make that point. 16 Have you confirmed that this is a treatise which was ο. 17 published in 1996? 18 Α. Yes, sir. 19 0. All right. 20 Now, let's turn to page 69 of this treatise. 21 Α. Could you acquaint me with what that chapter is, as a 22 start, and who the author of that chapter is? 23 ο. I'll try to do that. 24 The authors are Benjamin Chu (ph.) and Sue 25 Kang (ph) from the Department of Chemistry, State University

3

of New York in Stoneybrook. 1 2 Α. Okay. Do you happen to know whether they are recognized 3 0. experts in the field of pluronics? 4 5 I know the name Benjamin Chu but I don't know his Α. 6 stature. 7 ο. All right. And if we turn then to page 69, do you see that those 8 9 authors refer to pluronic as polyols? Yes, I see that. 10 Α. That is as of 1996? 11 0. 12 Α. Yes. By all admissions, having no connection with the 13 14 company. You know that pluronic has two hydroxyl groups, 15 Ο. correct? 16 In most -- yes, pluronic, if it's been initiated with 17 Α. sodium hydroxide rather than alkcoxide. 18 If it were initiated with alcoxide, it would have a 19. 20 maximum of one hydroxyl group. So if pluronic has two hydroxyl groups, and pluronic is 21 Q. a polyol, you have already acknowledged that a polyol is the 22 23 same as a polyhydric alcohol, correct? 24 Α. Sir, you're taking the --25 0. Correct or not?

d graden

4

You're taking this from two academicians rather than 1 Α. 2 from the company itself. 3 Am I correct, Dr. Eisch? 0. 4 Α. If you make that assumption --5 0. All right. 6 -- that these authors are the correct ones to designate Α. 7 a pluronic properly. 8 And with that assumption that they know what they're Ο. 9 talking about, and they know how to refer to pluronic; isn't 10 it true that a polyhydric alcohol, which is a polyol, and 11 pluronic is a polyol, and pluronic has two hydroxyl groups, doesn't it follow that a polyhydric alcohol may have as few 12 13 as two hydroxyl groups? MS. CONSALVI: Objection; lack of foundation, based 14 15 on the assumption he's asserting. 16 THE COURT: He's cross-examining. He can do that. 17 If the witness doesn't agree, he can say that. BY MR. BROWN: 18 19 ο. Am I correct? From the -- the precondition -- let me add a 20 Α. 21 pre-condition to it; that these two authors in the use of 22 pluronic polyol are more authoritative than the company 23 itself. And that is, to me, of small probability. 24 So you don't like the way these authors, authors of a Ο. 25 treatise from 1996, used the term polyol; isn't that it?

4

1 Α. I wonder why they do it --2 -- all right --0. 3 Α. -- when name pluronic is out there. 4 0. Well, let's see what GenSci does with pluronic. Let's look at Exhibit 31. 5 6 Again, this is a somewhat different form of the 7 publication that we were looking at this morning? 8 Α. Yes, I've seen this. 9 0. You should have a copy in front of you, Dr. Eisch. Well, I can see it on the screen here. 10 Α. 11 Exhibit 31. 0. 12 In particular, I want to direct your attention to 13 page GSL 000625, which appears to be the sixth page of the 14 exhibit. 15 MS. CONSALVI: Objection here to the document. He 16 said it's a different form than Exhibit 31. 17 THE COURT: I'm not following. 18 MS. CONSALVI: He's referring to Exhibit 31 but he said it was a says different form of that document. 19 MR. BROWN: It's not Exhibit 31. 20 21 It's Exhibit -- I'm sorry. It's not Exhibit 35, 22 which is what's I used this morning. It's different 31. 23 It's a different Exhibit because it has additional pages. 24 All right. Counsel has corrected me that the Exhibit 25 I previously referred to was 106.

1. 500

2. 2.

4

1	All right.
2	THE COURT: Instead of? Instead of 31?
3	MR. BROWN: I think I said 35 just a minute ago.
4	THE COURT: Exhibit 35.
5	BY MR. BROWN:
6	Q. All right.
7	So let's look at perhaps this is for what I'm
8	using it for the same the same language, but I won't know
9	without checking.
10	But let's proceed with this version of the document.
11	And you can see, am I correct, Dr. Eisch, that again,
12	it indicates that the information was compiled by Dr. Clokie
13	and Dr. Coulson.
14	A. Yes, sir, that's correct.
15	Q. And then if we look at the conclusions to this
16	publication, you see in the next to last paragraph a
17	reference to pluronic?
18	A. Yes, sir, I do.
19	Q. And Drs. Clokie and Coulson, when they refer to
20	pluronic, refer to it as a polyol, correct?
21	A. A no.
22	I think my reading of the line that is now boxed in
23	is that an extensive drug master file is on file at the
24	FDA, and in that file it, is so referred to. That's a
25	different thing than saying that they have referred to it as

1	such.
2	Q. Well, would you agree with me that this page indicates
3	or uses the term polyol to describe pluronic?
4	A. This page does that have that term on it, yes, sir.
5	Q. I think in your testimony, you indicated if the number
6	of hydroxyl groups are small in relation to the length of
7	the molecule, it's not appropriate to call the molecule an
8	alcohol. Did I fairly state that?
9	A. It is not appropriate to characterize the functional
10	group that is in dominance as the alcohol group.
11	Q. Would you agree that those who use pluronic refer to it
12	as a polyol?
13	A. You have shown me some examples of that usage, yes,
14	sir.
15	Q. And even though and they do that even though it
16	contains many more ether groups than it does hydroxyl
17	groups?
18	A. Yes, sir.
19	Q. In connection with formulating your opinions on acyclic
20	polyhydric alcohols, did you undertake any kind of review to
21	determine if there were any treatises on acyclic or
22	polyhydric alcohols?
23	A. Well, I'm aware of some treatises. I know there are
24	treatises on glycerol by itself. That certainly is a
25	example of an acyclic polyhydric alcohol.

1	Q. Did you come across any treatises on polyhydric
2	alcohols?
3	A. I know that there are some, but I did not refer to
4	them.
5	Q. Do you happen to know whether those whether one or
6	more of those treatises refer to alcohols containing two and
7	only two hydroxyl groups as polyhydric alcohols?
8	A. They might well do so.
9	Q. Are polyalkylenes a field in which you have
10	specialized?
11	A. Polyalkylenes? You mean the polymer now, like,
12	polyethelene and polypropylene. Yes, I have had a great
13	deal of experience in that field.
14	Q. And have you with poly what you call
15	polyoxyalkylenes?
16	A. No, I don't have direct experimental experience in
17	making such polymers.
18	Q. Do you have any publications directed to
19 ·	polyoxyalkylenes?
20	A. No, sir.
21	Q. Do you have any publications that show you have used
22	the term polyalkylene glycol consistent with the definition
23	of you are now advocating before this Court?
24	A. No, sir.
25	Q. I think I heard you correctly say that you regard the

5.5

1	term polyalkylene glycoll as a pernicious term?
2	A. Yes, sir, in that it leads, if you follow its apparent
3	prescription for writing a formula, to the wrong formula.
4	Q. So it bothers you to hear the term polyalkylene glycol
5	applied to block copolymers such as pluronic?
6	A. No because already by the use of the words block
7	copolymers, one is alerted to the fact that you have two
8	different monomers by the word copolymer; and by the block,
9	you're alerted to the kind of structure that you would have.
10	Q. I'm sorry, Dr. Eisch, that was not quite my question?
11	A. All right.
12	Q. It bothers you to hear the term polyalkylene glycol
13	apply to pluronic which happens to be a block copolymer,
14	right?
15	A. Yes, sir, that does bother me.
16	Q. And its use is pernicious because it's so commonly used
17	to describe compounds in a way that in your view of chemical
18	terminology is incorrect?
19	A. It's just sloppy terminology is what I would impute it
20	to.
21	Q. Are you aware that the term is commonly used to refer
22	to copolymers such as pluronic?
23	A. As we went through on the data base this morning, there
.24	are about 300 patents out there where it is possible tht
25	they are used in some instances synonymous with each other.

1	As I said, that was a small percentage of my casting.
2	Q. Well, let's look at the compound polyethylene glycol.
3	Is that a compound that is commonly referred to by chemists?
4	A. Yes, it is.
5	Q. And you understand that that compound, polyethylene
6	glycol, is also commonly referred to as PEG, P-E-G?
7	A. Yes, that's the acronym.
8	Q. And you are aware that the term polyethylene glycol
9	that the term polyethylene glycol is used all the time to
10	describe a compound containing repeating carbon carbon
11	oxygen units, correct?
12	A. Yes, sir.
13	In other words, a homopolymer of ethyleneoxide, yes.
14	Q. Nevertheless, even though you don't refer to the oxygen
15	unit, the compound is commony referred to as polyethylene
16	glycol, correct?
17	A. That's correct.
18	Q. So whether we're talking about polyoxyethylene glycol
19	on the one hand or poly ethylene glycol on the other, you
20	would understand that one is referring to the same compound?
21	A. Yes, sir.
22	As with other
23	Q Thank you, Dr. Eisch
24	A terminology
25	Q you've answered the question.

1	And would you it be true that chemists in the
2	industry would have no trouble knowing what is being
3	referred to when the term polyethylene glycol is used?
4	A. Yes, by dentil repetition.
5	Q. Now, why don't you don't like the usage of the term
6	polyethylene glycol, would you at lease acknowledge that the
7	term is frequently used to describe pluronic?
8	A. No, would to the agree with that.
9	Q. You would not.
10	Are you aware of a substantial body of patents that
11	use the term to describe both the that are used to
12	describe both homopolymers and copolymers, such as pluronic?
13	A. As with what? As with this term, sir?
14	Q. Polyethylene glycol?
15 ·	A. Yes, I admitted that there might be 298 since 1976 out
16	there out of 13,000.
17	Q. And Would you acknowledge that there are many patents
18	that describe pluronic as a polyalkylene glycol?
19	A. As I said, possibly, 300.
20	Q. How many of those patents have you looked at,
21	Dr. Eisch?
22	A. Out of those 300, sir?
23	Q. Yes?
24	A. I have read the abstract of every one of them.
25	Q. How many of them have you read in their entirety?

19-0-

:

5

5

Not -- the others -- what I would do after reading the 1 Α. 2 abstract is to look through the detailed description of the invention for the terms pluronics and/or polyethylene 3 glycol. And I did that with, I would say, almost all of 4 5 them. 6 Q. How many did you read in their entirety? 7 Α. None. 8 But the computer did that for me. 9 Well, let's talk about that. ο. 10 For your testimony on polyalkylene glycol, you're 11 relying on a computer search by Dr. Reese? 12 That's correct. Α. So is it he, not you, who characterized the patents 13 0. 14 that he found in the search? 15 A. No. He collected and culled out the patents. And I went through the stack of the 298. 16 17 ο. But out of 298, you didn't read in their entirety any 18 of those, correct? It wasn't necessary to do so. 19 Α. 20 Now, he says in his report that there are fewer than Q. -- that there are only two percent of the patents that 21 22 support Osteotech's interpretation of the term? 23 He did not make that calculation, I did. Α. 24 I took the number 298 over the sum of the occurrences 25 of pluronic by itself and polyethylene glycol by itself and

6

1	came to about 13,000, and then did the division and
2	multiplied by a hundred.
3	Q. But that number two per cent is a result of doing a
4	search based on looking for the term pluronic copolymer and
5	polyalkylene glycol?
6	A. No, sir, just the term pluronic. That was the search
7	term.
8	Q. Well, as I read the report, the 289 patents was arrived
9	at by doing a search on the term pluronic and the term
10	polyalkylene glycol, correct?
11	A. Yes, sir, I can agree that.
12	Q. All right.
13	And then it's from there that a further search was,
14	in effect, done to weed it down to six patents; and that
15	search was based on using the term pluronic copolymer and
16	polyalkylene glycol?
17	A. Right.
18	But you notice, I did not refer to that or use that
19 ·	in my testimony.
20	\dot{Q} . Well, you may not have referred to it or used it, but
21	that's how Dr. Reese says that he got to the six per cent?
22	A. Six patents.
23	Q. He says, in very few patents, six per cent, pluronics
24	are described as polyalkylene glycol copolymers, correct?
25	A. Let me get to that. Can you direct me to the line?

6

:

;

1	I'm looking here
2	Q. It's tab
3	A. I have the QQ tab. But where is it within that?
4	Q. Page six, line 12?
5	A. Yes, I have it.
6	Q. So fast I understand it, what Dr. Reese did was, first,
7	he did a search on pluronic and polyalkylene glycol and came
8	up with 289 patents, right
9	A. Where they both occurred in the same patent, yes, sir.
10	Q. Right.
11	A. And then, he did a further search to look for a subset
12	of those patents that refer to both pluronic coploymers and
13	polyalkylene glycols, right?
14	A. But that six well, let's see. That six patents is
15	out of the 280.
16	Q. We're getting there. Let's start
17	Am I correct as I characterize the searches done by
18	Dr. Reese?
19	A. Yes, sir.
20	Q. So he did a second search where he searched on pluronic
21	copolymers from among the 289 patents, correct?
22	A. Yes, sir.
23	Q. And then you took those patents
24	A. No, no, I started earlier. I started with the total
25	number of hits on pluronic by itself, which is 8,000
	· · · · · · · · · · · · · · · · · · ·

:

1 something, way at the start of the search, sir. 2 And then I took the total number of hits of polyalkylene glycol written as one or two words by itself. 3 4 And that was 5,000. 5 And so then I looked -- used this his number of 279 or 289 where he found both of these terms in the same patent 6 7 and then to say where these would be cases where maybe they 8 might be used synonymously, I took that 279 over 13,000, 9 times 100, to arrive at my two per cent. 10 ο. All right. 11 That's not part of Dr. Reese's report? 12 Α. No, that's my calculation. But that's simple arithmetic. 13 14 0. All right. 15 Now, am I correct, Dr. Eisch, that you contend 16 pluronic, which has two hydroxyl groups, is not a glycol 17 because it's so large in relation to the number of hydroxyl 18 groups? 19 Because of the preponderance of ether linkages over Α. 20 those two hydroxyl groups. And the preponderance is 125 21 ether linkages for every one hydroxyl group. 22 And yet, you're familiar with polyethylene glycol which 0. 23 in many cases is larger and perhaps much larger than 24 pluronic, correct? 25 It could be, yes, sir. Α.

1	Q. Nevertheless, chemists refer to polyethylene glycols as
2	glycols even though they have many, many more carbon carbon
3	oxygen units than they have hydroxy units, correct?
4	A. As I say that's not formal nomenclature.
5	Q. You don't approve of that nomenclature?
6	A. I just recognize it as casual nomenclature.
7	Q. In formulating your opinion, Dr. Eisch, on the term
8	polyethylene glycol, did you attempt to identify any
9	treatises or dictionaries that define the term polyethylene
10	glycol?
11	A. Yes, I looked in a number of places where these
12	polyethylene glycols are discussed.
13	Q. Did you happen to look at the Kirk Othmer Enclycopedia
14	of Chemical Technology?
15	A. Yes.
16	MR. BROWN: Please bring up Exhibit 324.
17	BY MR. BROWN:
18	Q. You recognize that as a reference text for chemists?
19	A. Yes, sir.
20	Q. And if we turn to page 489 of Exhibit 324?
21	A. May I have your date on this one? Do you have the date
22	on which this was published?
23	Q. Yes, it's in your book. It was published in 1998?
24	A. Okay. Yes, I see it.
25	Q. If we go to page 489, the bottom two paragraphs, am I

1 correct that the authors of this text refer to polyalkylene 2 glycols that are copolymers? 3 Α. I don't see the word copolymers. 4 **Q**. Well, doesn't it say that polyalkylene glycols are usually prepared either from propylene oxide or up to 50 5 per cent ethylene oxide? 6 Right. But that's not a definition. 7 That's a Α. 8 prescription of how they are prepared. I wouldn't call that 9 definition. Well, if only 50 per cent is ethylene oxide, wouldn't 10 0. 11 you agree that rest of it has to result in a copolymer? 12 Α. I would call your attention to the first part of that phrase; they are usually prepared either from propylene 13 oxide, as a water insoluble type, meaning that that is the 14 15 the homopolymer propylene oxide. And then they go on to say, as another preparation, 16 17 that sometimes, they are copolymers of propylene oxide and ethylene objection. 18 19 So again, we have a case where we're talking about 20 polyalkylene glycols and they go on to distinguish the two classes of homopolymers and heter-- copolymers. 21 Would you agree that under the term polyalkylene 22 Q. 23 glycols, this text indicates that they and include 24 copolymers? 25 Α. Yes, they do.

7

1	MR. BROWN: Offer Exhibit 324 intp evidence?
2	THE COURT: Yes.
3	BY MR. BROWN:
4	Q. Let's look at Exhibit 681. This is Ashford's
5	Dictionary of Industrial Chemicals; are you familiar with
6	this reference book?
7	A. I have not had occasion to use it, no.
8	Q. You understand, though, that it's a reference book
9	commonly used by industrial chemists?
10	A. If you say so.
11	Q. It's copyrighted in 1994?
12	A. Yes, sir.
13	Q. Let's look at page 724 and you see a there a definition
14	for polyalkylene glycol.
15	Have you had a chance to read that passage,
16	Dr. Eisch?
17	A. Yes.
18	Q. Would you agree with me that these authors have used
19 ·	the determine polyalkylene glycol so as to refer to
20	copolymers?
21	A. In a preparative sense, yes, sir.
22	Q. Well, the result of the process they describe is a
23	copolymer which they refer to as a polyalkylene glycol,
24	correct?
25	A. Yes, sir.

	•
1	MR. BROWN: May I approach the witness, your Honor.
2	THE COURT: Yes.
3	BY MR. BROWN:
4	Q. Dr. Eisch, I'm handing what's been marked as
5	Exhibit 4002. Take a minute to look at it.
6	Now, that Exhibit 4002 is pluronic in water, correct?
7	A. Yes, sir, 25 per cent by weight, pluronic.
8	Q. And pluronic in water is a dispersion
9	A. It's a colloidal dispersion, yes, sir.
10	Q. All right.
11	And that exhibit is at room temperature?
12	A. Yes.
13	Q. Has that exhibit, or the contents of that exhibit
14	changed in shape since this morning?
15	A. Perhaps, you would direct me to the change. It looks
16	the same to me.
17	Q. Well, don't you recall yesterday that all of the
18	contents were on the bottom of the container?
19	A. They still are.
20	Q. So are you saying are you testifying that the
21	contents of Exhibits 4002 have not changed in shape?
22	A. Well, certainly, they're still on all on the bottom,
23	and
24	Q. Dr. Eisch, have the contents of Exhibit 4002 changed in
25	shape?

1.

.

1 Α. Are you talking about the surface now as I hold it 2 upright? 3 Q. I'm talking about any aspect of the pluronic water mixture, has it changed in shape since you used that exhibit 4 5 yesterday? 6 Frankly, when I obtained the exhibit, all I noticed was Α. 7 that it filled the container. I didn't notice anything 8 about anything else. 9 Can you determine from looking at the exhibit that in 0. 10 fact there has been some flow of the contents down the side 11 of the container? To be honest with you, I did not notice the surface 12 Α. 13 when the sample was handed to me yesterday. 14 MR. BROWN: All right. 15 I have no further questions, Dr. Eisch. 16 THE COURT: Do you have anything else? 17 MS. CONSALVI: Yes we do. MR. BROWN: I'm sorry, your Honor. May I just as a 18 housekeeping matter offer a couple more exhibits? 19 20 THE COURT: Yes. 21 MR. BROWN: They are Exhibits 710. 22 THE COURT: Yes. 23 MR. BROWN: Exhibit 176. 24 THE COURT: Yes. 25 MR. BROWN: Exhibit 70. Exhibit 31. Exhibit 681.

8

1	THE COURT: Yes.
2	MS. CONSALVI: I don't think 31 is right.
3	THE COURT: Exhibit 31 is not right. It's 35, isn't
4	it?
5	MR. BROWN: Well, we'll take care of that.
6	THE COURT: There's no reason to sort it out right
7	now.
8	MR. BROWN: And in addition, Exhibit 370 was used so
9	we offer that, at this time.
10	THE COURT: Yes.
